

WHAT IS CLAIMED IS:

1. A glaucoma treatment kit, comprising:
an implant comprising:
an outflow portion sized and shaped to be received within Schlemm's canal of an eye; and
an inflow portion in fluid communication with the outflow portion, the inflow portion configured to be disposed in the anterior chamber of the eye;
wherein a long axis of the inflow portion is disposed at an angle to a long axis of the outflow portion; and
an applicator configured to be introduced into the anterior chamber, the applicator comprising a tube, wherein the tube releasably holds at least part of the implant.
2. The glaucoma treatment kit of Claim 1, wherein the tube releasably holds at least part of the inflow portion of the implant.
3. The glaucoma treatment kit of Claim 1, wherein the implant is substantially L-shaped.
